

## Supplementary Materials

**Supplementary Table 1. Articles ( $n = 16$ ) reporting the applications of next-generation sequencing including both shotgun metagenomics and 16S amplicon sequencing of fecal samples on athlete microbiome research. Articles describing the association of gut microbiota with *exercise performance of non-athlete individuals were also considered*. Some articles ( $n = 12$ ) reported the associations between specific microbial clades and sports performance**

Database	Study	Technique	Participants	Sex	Age range	$n$	Taxa associated to sports performance
<i>Sequencing experiments describing microbial taxa associated to sports performance (<math>n = 12</math>)</i>							
Scopus, WOS	Barton <i>et al.</i> <sup>[14]</sup>	Shotgun	Professional rugby players ( $n = 40$ ) and controls ( $n = 46$ )	Male	-	86	<i>Akkermansia</i> , <i>Erysipelotrichaceae incertae sedis</i>
Scopus, WOS	Cronin <i>et al.</i> <sup>[15]</sup>	Shotgun	Healthy sedentary adults ( $n = 90$ ) with a short-term exercise regime	Male and female	18-40	90	<i>Prevotella copri</i>
WOS	Kostic <sup>[16]</sup>	Shotgun	Marathon runners, ultramarathon runners, Olympic-caliber rowers and sedentary controls ( $n = 50$ )	Male and female	-	50	<i>Veillonella</i>
Scopus, WOS	Keohane <i>et al.</i> <sup>[17]</sup>	Shotgun	Athletes who completed an unsupported transatlantic row ( $n = 4$ )	Male	-	4	<i>Dorea longicatena</i> , <i>Prevotella copri</i> , <i>Roseburia hominis</i> , unclassified members of <i>Subdoligranulum</i>
Scopus, WOS	Scheiman <i>et al.</i> <sup>[18]</sup>	16S and Shotgun	Marathon athletes ( $n = 15$ ) and sedentary controls ( $n = 10$ )	Male and female	-	25	<i>Veillonella atypica</i>
Scopus, WOS	Petersen <i>et al.</i> <sup>[19]</sup>	Shotgun	Competitive cyclists ( $n = 33$ )	Male and female	19-49	33	<i>Akkermansia</i> , <i>Bacteroides</i> , <i>Eubacterium</i> , <i>Prevotella</i> , <i>Methanobrevibacter smithii</i> , <i>Ruminococcus</i>
Scopus, WOS	O'Donovan <i>et al.</i> <sup>[20]</sup>	Shotgun	International level athletes ( $n = 37$ ) across 16 different sports	Male and female	-	37	<i>Streptococcus suis</i> , <i>Clostridium bolteae</i> , <i>Lactobacillus</i> phage LfeInf, <i>Anaerostipes</i>

							<i>hadrus</i> in sports with moderate dynamic component. <i>Bifidobacterium animalis</i> , <i>Lactobacillus acidophilus</i> , <i>Prevotella intermedia</i> , <i>Faecalibacterium prausnitzii</i> in sports with high dynamic and low static components. <i>Bacteroides caccae</i> in sports with high dynamic and static components
Scopus	Fart <i>et al.</i> <sup>[21]</sup>	Shotgun	Physically active senior orienteers ( <i>n</i> = 28) and community-dwelling older adults ( <i>n</i> = 70)	Male and female	67-76	98	<i>Faecalibacterium prausnitzii</i>
Scopus, WOS	Kulecka <i>et al.</i> <sup>[22]</sup>	16S	Marathon runners ( <i>n</i> = 11), crosscountry skiers ( <i>n</i> = 11) and healthy sedentary controls ( <i>n</i> = 46)	Male and female	14-72	68	<i>Lachnospiraceae</i> , <i>Prevotella</i>
Scopus, WOS	Moitinho-Silva <i>et al.</i> <sup>[23]</sup>	16S	Healthy sedentary adults exposed to endurance and strength training and controls ( <i>n</i> = 42)	Male and female	20-45	42	<i>Coprococcus</i> , <i>Parasutterella</i> , <i>Ruminococcaceae</i>
Scopus	Fukuchi <i>et al.</i> <sup>[24]</sup>	16S	Endurance athletes ( <i>n</i> = 13)	Male and female	19-21	13	<i>Firmicutes</i>
Scopus	Han <i>et al.</i> <sup>[25]</sup>	16S	Rowing athletes ( <i>n</i> = 19)	Female	Dec-26	19	<i>Firmicutes</i> , <i>Bacteroidetes</i> , <i>Proteobacteria</i> and <i>Actinobacteria</i> in all athletes. <i>Faecalibacterium</i> and unclassified members of <i>Clostridiales</i> and <i>Lachnospiraceae</i> in adult elite athletes. <i>Bacteroides</i> in young elite athletes
<b>Sequencing experiments describing athlete microbiota but no microbial taxa associated to sports performance (<i>n</i> = 4)</b>							

Scopus, WOS	Genç <sup>[26]</sup>	Shotgun	Professional athletes ( $n = 5$ ), amateur athletes ( $n = 5$ ) and sedentary individuals ( $n = 5$ )	Male	18-24	15	-
Scopus, WOS	O'Donovan <i>et al.</i> <sup>[27]</sup>	16S and Shotgun	Cricket players ( $n = 21$ )	Male and female	-	21	-
Scopus	Axelrod <i>et al.</i> <sup>[28]</sup>	Shotgun	Endurance athletes ( $n = 7$ )	-	18-45	7	-
Scopus	Özkan <i>et al.</i> <sup>[29]</sup>	16S	Professional football players ( $n = 5$ ), amateur football players ( $n = 5$ ) and sedentary controls ( $n = 5$ )	Male	18-24	15	-
