

### A. Americas

### B. Africa

### C. Asia

**Supplementary Figure 1.** Summary of RABV sequencing by country, including the sequencing platform, type of sequence generated, location of sequencing and analyses undertaken. The colour intensity increases with the number of publications per country; note the different colour scale by regions; (A) Americas, (B) Africa, (C) Asia. Only twenty nine publications generated WGS (from 4 countries) and nine conducted phylogeographic analyses. Three publications present data from across multiple countries, with two of these increasing both the number of countries with WGS and phylogeographic analyses<sup>[51,52]</sup>. This is an enlarged version of main Figure 3.
